RELUTION FOR EDUCATION

Tablet-Management for schools

Relution for Education

Dear reader¹,

the following pages describe how to use tablets in school lessons from different perspectives, with a special focus on all those involved and their needs. Our solution „Relution for Education“ is intended as a tool to make teaching with tablets easier, more productive and safer. To this end, we are working on its constant further development - in the sense of continuous improvement and for the best possible digitally supported teaching.

Yours sincerely,

M-WAY Solutions GmbH

Introduction

Smartphones and tablets have become an integral part of our children's everyday lives, making it obvious to use this technology at school as well. Both parents and teachers see the benefits as well as the risks of using digital media in the classroom.

Digital learning using tablets and mobile apps concerns everyone involved in education. After all, digitization offers teachers and students completely new opportunities for interactive lessons.

Tablets and smartphones are finding their way into schools and training centers, not least thanks to various government initiatives.

This development opens up new perspectives for schools, students, parents and textbook providers in dealing with digital devices and content. At the same time, schools are faced with the challenge of making sure that students use this technology in a helpful way, promoting children's media competency instead of providing a vehicle for more distraction.

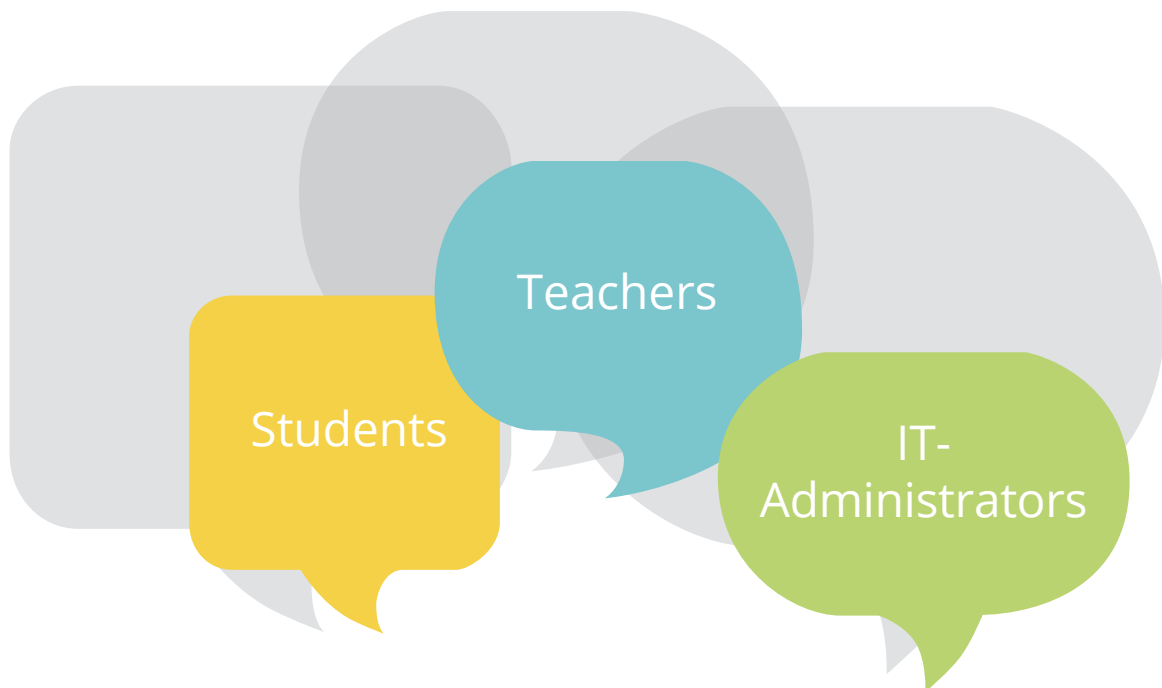

Challenges

Thoughtful provisioning of the devices themselves as well as of the applications and especially the data stored on them is required. Strict roles must be defined for students and teachers to ensure that the devices and their content are safe and in compliance with the GDPR (General Data Protection Rules).

This is asking too much of conventional systems for Mobile Device Management (MDM). Relution for Education is the only solution that has been especially designed for both the education sector and GDPR compliance.

Manage tablets and apps comprehensively, with the needs of students, teachers and IT admins in mind.

Relution for Education

The school MDM solution made in Germany.

Relution for Education is a software for schools and other educational institutions for easily and intuitively controlling and monitoring tablets as well as apps and other content.

Special didactic functions simplify the introduction and operation of tablets for all involved parties while guaranteeing compliance with the highest data security standards.

Relution for Education is being developed in Germany with EU security laws in mind. It is available both for on-premise installation at the school or school district level and as a cloud-based solution hosted by a Relution Partner in your country.

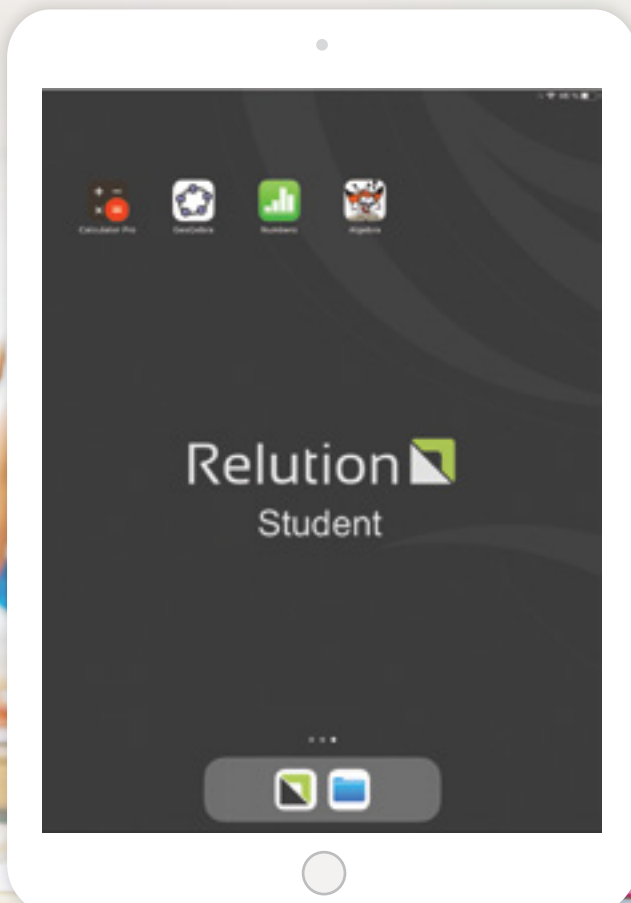

Students

Through interactive, tablet-based learning, students receive a contemporary, motivating and efficient education, having access to the world's knowledge instead of school book knowledge - plus they have to carry fewer books around. At the same time, device restrictions are put in place so that the development of the student's media and communication skills are not compromised. Above all, Relution for Education offers the protection of the tablets in the classroom - only those functions required for the current lesson are available, everything that distracts is specifically deactivated.

For multi-user tablet sets, the devices can be dynamically adapted to different classes, students and subjects through a personalized login. Outside the classroom, additional functions, such as surfing the Internet, can be activated.

Safe, focused tablet use for increased media competency.

IT Administrators

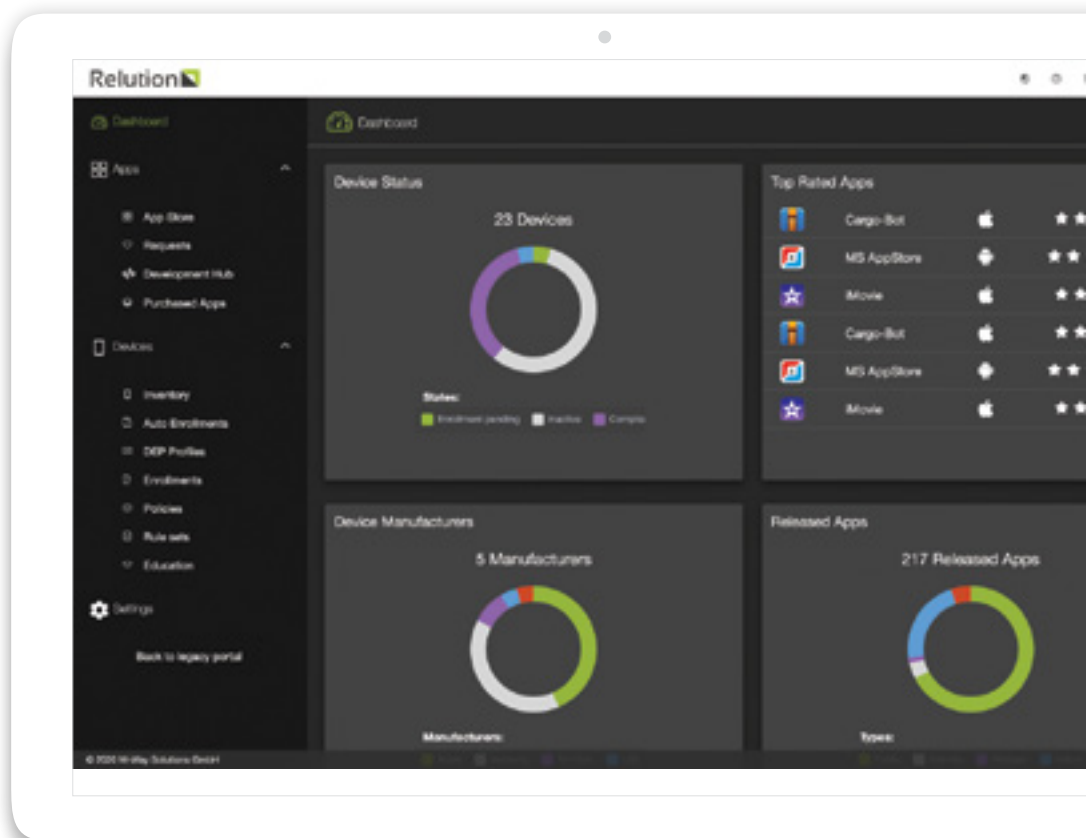

IT administrators can easily manage both school and student owned tablets running iOS or Android through a simple browser-based console with just a few simple steps. Relution for Education automatically controls the distribution of device configurations, policies and apps.

If the devices are lost or stolen an alarm is triggered and the administrator can locate and lock the devices. This way, the entire fleet of devices is kept inventoried and controlled at all times.

For student-owned devices, data protection functions can be adjusted - for example, the administrator can be prevented from completely deleting the device, locating it or viewing the list of installed apps.

Suitable tablets can be installed and configured automatically when first switched on - without any manual intervention - so that it is no longer necessary to manually register newly purchased devices with the MDM.

Comprehensive tablet management with full data protection.

Teachers

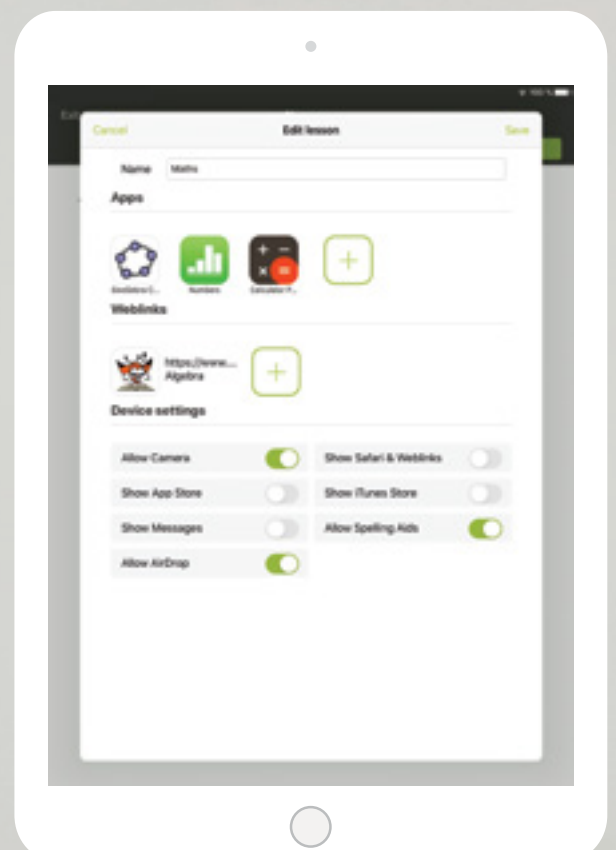

Teachers can instantly use tablets in class without having to configure and set them up. No valuable teaching time is lost for tiresome administrative work. The required apps are automatically available at any time and the attention of the students is ensured by device restrictions. This means that the tablets are no longer a burden for the teacher but can safely be used in class without the risk of losing the student's attention. At the push of a button, a student's individual screen content can be shown on the teacher's device or on a projector.

For maximum attention, the teacher can simply lock all tablets in the classroom at any time.

For tablet sets, Relution offers a special shared device mode that initially locks all tablets and then - after a student logs in - dynamically installs and displays the apps assigned to the student or class. All other apps are hidden to promote efficient work.

On logout, these apps can automatically be deleted again so that data protection compliance is guaranteed.

A dedicated teacher console allows the teacher to dynamically assign apps to all tablets in his class - whether they are class sets or student owned devices. For the duration of the lesson, all apps that are not required are hidden. Thus, Relution offers an easy way to distribute teaching relevant apps from the teacher tablet and ensure their efficient use.

The connection of file server shares (SMB and WebDAV) is also integrated in Relution, so that the students can store and retrieve the results of their work centrally in accordance with data protection regulations.

Provide teachers with new didactic possibilities with little effort.

Your advantages as Relution for Education partner

Due to the special requirements of the education sector, Relution for Education is offered exclusively through suitable partners who have the necessary expertise in this environment. System vendors and school software manufacturers, who today push the digitalization in schools and like to offer complete solutions, can use Relution for Education to cover all mobile topics. Our software has been specifically developed in such a way that integration into existing school server and WIFI solutions is easy - even up to complete white labelling Relution with the partner's brand. Relution for Education is therefore a perfect supplement to existing school IT solutions and can be provided and supported by local IT partners.

Simple technical integration as well as an attractive collaboration model make it easy to complement your school solution with Relution for Education. We see ourselves as a supplier to local school IT partners who want to ensure that school IT meets the rapidly changing requirements of today. Relution for Education can be used as standard software but can also be extended on request as a white label solution or with customer-specific functions.

In addition, we support our partners with active support and the provision of information and knowledge from hundreds of mobile projects over the last 10 years.

Let's start the digitization of school education

Help shape the digitalization of schools. Become a Relution for Education partner and offer your customers the leading tablet management solution for the education sector!

» For several reasons, Relution is perfect for schools: First of all, it is a German provider that works directly with the government and knows its way around the education sector. We therefore recommend Relution to other schools. With Relution, the organisation of tablets is very easy.

Simon Terber, GTS - High school Edenkoben

» Relution is indispensable for us as a central IT infrastructure component. The cooperation with the Relution team is excellent.

Werner Umbach, Kassel School District

» Besides the ideal software solution for our tasks, the price of the software solution was one of the main reasons for us to consider Relution. With regard to the software solution and especially the customer service we are very satisfied with our choice.

Sven Lenkewitz, University of Cologne
